

### Skin Biopsy to Diagnose Small Fiber Neuropathy

**Therapath Neuropathology** provides an objective, quantitative test for small fiber neuropathy using a standard 3mm punch biopsy. The pathology analysis and in-office procedure are reimbursed by commercial insurance, Medicare, and Medicaid.

Therapath provides analysis of skin samples for both Epidermal Nerve Fiber Density (ENFD) and Sweat Gland Nerve Fiber Density (SGNFD) testing. These tests are the most sensitive measure of small fiber neuropathy and provide answers to patients who suffer from pain, numbness and tingling. Diagnostic reports with nerve quantification and age and gender-specific reference ranges are completed within eight days.

Therapath's biopsy kit is shipped at no charge and makes the testing process simple. The kit includes everything needed for the biopsy and is stored at room temperature for several months. After the procedure, samples are shipped back to the laboratory immediately. No transfer or rinsing step is needed.

*For more information, visit [www.therapath.com/skin](http://www.therapath.com/skin). To order a sample kit and get started, please call 800-681-4338, email [order@therapath.com](mailto:order@therapath.com), or click here.*

### Introducing The Uniflex 4

**KLM Laboratories** strives to help practitioners meet the ever-changing needs of each patient. The Uniflex 4 is the newest member of the Uniflex family, and it

is one of the most the most versatile orthotics on the market. This device is equipped with a semi-rigid polypropylene shell and 4 degree Varus unified rear-foot post. In an effort to render this device even more functional KLM allows the practitioner to choose the stiffness. The Uniflex 4 can be ordered more rigid or more flexible. The conventional Uniflex 4 comes with a gray simulated leather top cover, but KLM will modify the top cover with any of their various top cover materials. With the addition of one or all of their accommodations the possibilities for the Uniflex 4 are unlimited. And as an added bonus, KLM Labs offers a lifetime guarantee against breakage.

**Powerstep® Introduces New Memory Foam Cushioning Insoles**

Stable Step, LLC is pleased to introduce its newest product to the Powerstep® line, the Powerstep® Memory Foam Cushioning Insoles.

**Product Features**

The Powerstep® Memory Foam Insoles are the first product from Powerstep® that combines plush memory foam with their proven-effective, biome-

chanically-correct polypropylene arch support. Memory foam helps redistribute weight and surface

pressures and also conforms to the foot for greater comfort. The foam rebounds after being compressed for that ahhh feeling with each step. It is an ideal material for those with sensitive feet or fat pad atrophy/degeneration, or for those needing pressure relief.

**Availability**

The Memory Foam Insoles are available in 10 sizes: Men's 4-15 and Women's 6-12. The insoles can be easily transferred from shoe to shoe and are supplied in full-color, informative packaging. This product is available to direct Powerstep® customers only.

Powerstep's lineup of styles includes different levels of cushioning, different sizes, different lengths, and different features to accommodate various types of shoes while improving foot function and alleviating or preventing foot pain.

For more information on Powerstep: [www.powerstep.com](http://www.powerstep.com) or [click here](#).

**daniPro's New Enhanced Formula Now Available, New Color Collections to Be Introduced in 2017**

*"No one knows your patients' concerns about their toenails, including*

*their appearance, better than you. That's why I developed daniPro.*

**SPOTLIGHT ON GORDON LABS:  
Fighting Fungus on Two Fronts**

Gordon Laboratories' twofold approach to fighting fungus offers a unique and comprehensive way to treat one of the most common foot problems today. To beat fungus, begin with a powerful broad spectrum topical antifungal—**Gordocho**m.

Gordocho

utilizes Undecylenic Acid 25% to kill tinea pedis, ringworm and dermatophytosis. The Chloroxylene

m is effective against fungi and yeast organisms. Gordocho

m's advantage over some other topicals is its unique penetrating oil base which enhances the action of these antimicrobial agents to treat fungal conditions. **Mycomist**—Gordon's unique fungicide for use only in footwear—extends your reach to attack fungus. Mycomist prevents the cross-contamination of fungus when it extends from the foot to the shoe. It includes the triple action formula of formaldehyde, a highly effective fungicide; Benzalkonium Chloride to kill odor causing germs; and Chlorophyll for additional deodorization.

## IntraDerm Pharmaceuticals Launches Two New Office-Dispense Products Utilizing Patented Dermal Integration Technology

**IntraDerm Pharmaceuticals**, a division of Oculus Innovative Sciences, Inc. (NASDAQ: OCLS, warrants OCLSW), a specialty pharmaceutical company that develops and markets solutions for the treatment of dermatological conditions and advanced tissue care, has announced the launch of two new dermal integration technology-based products in the United States.

The first, **RU-25™ Dermal Foam**, is a urea-based dermal foam that softens and moisturizes dry skin and works to exfoliate and repair the natural skin barrier. It is proven to moisturize and manage callused, thick and cracked skin.

The second, **CLO-1™ Antifungal Foam**, contains 1% Clotrimazole as a broad-spectrum antifungal and provides antifungal relief of redness, irritation, scaling, cracking, itching and burning skin through a unique foam delivery technology.

“The benefits of these two dermal integration technology-based products is that first and foremost, they deliver the active ingredients directly into the skin where they are most needed,” said Jeffrey Day, president of IntraDerm Pharmaceuticals, Oculus’ dermatology division. “Beyond that, they are water and lipid-based, non-greasy and they absorb immediately into the skin with no residue after application, leaving a silky soft feel. Since they are both foams, this encourages patient compliance, thus typically one can expect to see improved patient outcomes.”

Both RU-25™ and CLO-1™, which are now available, are marketed by IntraDerm Pharmaceuticals with a full-time sales force of 22. *More information is available at [www.intraderm.com](http://www.intraderm.com) or [click here](#).*

*A nail polish that can help your patients toenails look healthier, with ingredients you know and can trust.”*

—Dr. Gary Evans

**daniPro** was founded more than six years ago by Board Certified Podiatrist and Surgeon Dr Gary Evans, and is now available for sale at hundreds of podiatric offices worldwide.

daniPro is for your health-conscious patients because

it is completely free of 8 damaging chemicals found in most other traditional polishes. New for 2017 is another innovative formula for select shades which includes Undecylenic Acid\* as well as biotin (vitamin B7), vitamin E and vitamin A. Seasonal color collections will also be introduced this year to their existing range of 18 shades.
