

## The New Richie AeroSpring Brace

The new **Richie AeroSpring Brace Systems** offers an attractive alternative to cumbersome walking boots, which are commonly prescribed for lower extremity injuries.

Chronic conditions such as severe plantar heel pain, Achilles tendinopathy and midfoot arthritis can now be managed with a dynamic carbon fiber ankle-foot orthosis combined with custom foot orthotic offloading. This lightweight system is PDAC approved and reportedly will assure better patient compliance and favorable treatment outcome.

For details, please visit [www.richiebrace.com](http://www.richiebrace.com) and contact any of the authorized Richie Brace® lab distributors.

## QuickNotes Releases Version 6.0 “Team Workflow” Edition

**Quick Notes**, a leader in Note Systems and EMR for Podiatry, has released its new Version 6.0 “Team Workflow” Edition.

PDQ Touch is designed to work anytime and anywhere. PDQ can be used on iPads or Samsung Galaxy tablets, as well as laptops, desktops or touchscreens. PDQ is fully customizable, so it can easily be tailored to your specific practice. Use PDQ in your office, at nursing homes, or even at home. PDQ has many user-friendly

*Continued on page 148*

features, from setting up your favorite note profiles to using your previous visit to create today’s note. You can even use voice dictation to edit your notes right away.

QNotes Office EMR links seamlessly with PDQ Touch. Notes are transcribed in seconds. Plus you can scan forms, reports and cards into the EMR. Add Smart Backup Kit with external drives and free offsite data storage, so your patient data is fully protected.

Visit [www.qnotes.com](http://www.qnotes.com) or call 800-899-2468 for an internet demo.

## O’Brien Medical Announces Product Launch for ETFMx

**O’Brien Medical** is pleased to announce the introduction of the ETFMx, multi-frequency electronic tuning fork. Building on the success of the ETF128, the Mx takes vibration testing to the next level while still providing the same standardized testing platform and quantitative output. Now clinicians can test patient’s sensation with the three most used frequencies in medicine, 64, 128 and 256 Hz.

The ETFMx is ideal for diagnosing and tracking diabetic peripheral neuropathy, entrapment neuropathy, carpal tunnel, radiculopathy and fall risk. It has also proven useful for sensation assessment in patients undergoing surgical nerve decompression. This multi-frequency instrument saves time and money by essentially integrating three tuning forks into one. The Mx will be sold exclusively through the company website and select distribution partners.

*O'Brien Medical (www.obimed.com) is a privately held medical device manufacturer focused on commercializing innovative products for the diabetes and neurodiagnostics markets. The company supports diabetes research through philanthropic giving and remains committed to manufacturing its products exclusively in the USA.*

## Surefit Launches New eCommerce Site

**SureFit Lab** has launched its new ecommerce site at SureFitlab.com. This online store gives practices access to over 300,000 products that can be delivered to your practice in a timely and cost-effective manner. Your practice

will be able to access Surefit's full line of custom and off-the-shelf bracing as well as the nation's largest stocked diabetic shoe selection.
