

## Areni One: Where Comfort Meets Therapeutic Value

By Arkady Altskan

Manufactured in the USA, **Areni One**® orthopedic and diabetic comfort shoes are designed to meet the various needs of people with foot problems. No matter what you are suffering from, be it ankle pain, arch pain or hammertoes, insensate diabetic foot—our orthopedic and diabetic shoes will help you deal with these problems. Areni One®’s reputation for offering superior quality products has if anything grown over the years. We combine the expertise of leading podiatrists and our ample understanding of the shoe industry to restore the faded glory of American manufactured footwear. The shoes are designed to fulfill the medical needs and fashion expectations of our customers. Areni One® shoes are not only for those dealing with diabetes, but are also beneficial for those patients suffering

are made with full-grain high quality leather uppers, seamless linings and foam cushioning for diabetic feet. Added toe-box space provides extra room to accommodate orthotics, and the extended medial counter allows better rearfoot stability control. And even with all of these therapeutic features we still manage to make our shoes aesthetically pleasing.

At Areni One® we believe there is a shoe for everyone—thus we offer a multitude of sizes and widths. So if you are a podiatrist looking for comfortable shoes with

with other foot complications and who need a comfortable walk in daily life.

Produced by ecologically clean technology with the use of robotics, our wide range of diabetic or orthopedic comfort shoes for both men and women will accommodate different foot deformities with different sizes and widths.

Our footwear incorporates many useful features and innovations. All shoes are made with strobel construction insole, which creates an anatomically shaped profile for a more comfortable fit. This feature is available only with our superior direct-injection technology, while most of our competitors use adhesive construction for their manufacturing. This technology also allows us to have arch support built into each outsole, and our “Heel Cradle System” increases stability. The same technology allows us also to use extremely light and durable slip-resistant material. Some of our shoes have stretchable leather to accommodate bunions and other foot deformities. All Areni One® shoes

powerful therapeutic value, Areni One® is an ideal choice. Areni One® footwear presents the perfect fusion of medical expertise with experienced craftsmanship: your patients will love these shoes with every step they take, and
