New & Improved: Bunionectomy Coding

These changes have been a long time coming.

BY HARRY GOLDSMITH, DPM

Welcome to Codingline Particulars, a regular feature in Podiatry Management focusing on foot and ankle coding, billing, and practice management issues.

According to Kelikian and others, the term “bunion” may have come from
- Bugnone (Italian) lump
- Buigne (French) bump (pronounced boom)<p><br/></p>
- Bunny (old English) jump
- Bunki (Scandinavian) brunch
- Bovvos (Greek) hill or eminence

In 2017, we finally revised the “correction, hallux valgus” family of code section, adding some codes, getting rid of some codes, and overall improving coding descriptions.

Since we were at it, we also added, for the first time anywhere in the world, new bunion and bunionette (baby bunion) ICD-10-CM codes.

From ICD-10 with Love: “Bunions & Bunionettes”

In the old ICD-9 days, if you looked up “bunion” in the Alphabetic Index, you would find it wedged between “bratwurst knee” and “Bunyamwera fever”. Bunionette was also there between “baloney cheeks” and “buphthalmia”. Note these are two distinct deformities of the foot amazingly sharing the same diagnosis code: ICD-9 727.1. How could this be, you ask?

Along comes ICD-10 with its 68,000 codes and, wouldn’t you know it, someone forgot to include both bunion or bunionette. In fairness, if you looked really hard under the “hallux valgus, acquired” code, you would have seen “Inclusion Term: bunion” sharing the same codes, M20.11 (hallux valgus, acquired, right foot) and M20.12 (hallux valgus, acquired, left foot)...but no sign anywhere in ICD-10 of bunionette.

The APMA ICD-10 team brought this up to CDC/CMS. It was explained that a bunion is a different deformity than hallux valgus and that a bunionette is also a distinctly different deformity. Reason prevailed. Introducing the 2017 ICD-10-CM additions.

M21.611 bunion of right foot
M21.612 bunion of left foot
M21.619 bunion of unspecified foot
M21.621 bunionette of right foot
M21.622 bunionette of left foot
M21.629 bunionette of unspecified foot

By the way, the APMA team asked that “bunionette” be replaced with “tailor’s bunion”, but apparently the World Health Organization (WHO) is not familiar with the term. At least we got the separate codes. Now let’s hope payers program their software to recognize and accept them.

Bunionectomy Coding for 2017

The bunionectomy family of codes typically begin, “Correction, hallux valgus (bunion)”. One of the problems with this is that some professional coders reviewing claims look for “hallux valgus correction” to match the CPT description while many foot and ankle specialists use the term “bunionectomy” or “hallux abduc-

In 2017, we finally revised the “correction, hallux valgus” family of code section, adding some codes, getting rid of some codes, and overall improving coding descriptions.

CPT 28289 Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; without implant Continued on page 46
Bunionectomy (from page 45)

**CPT 28291** Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; with implant

Goodbye, CPT 28290—deleted

**CPT 28292** Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with resection of proximal phalanx base, when performed, any method

Goodbye, CPT 28293—deleted [see CPT 28291 for a 1st metatarsophalangeal joint implant]

Goodbye, CPT 28294—deleted (Joplin, we’ll miss you…not)

**CPT 28295** Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with proximal metatarsal osteotomy, any method

**CPT 28296** Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with distal metatarsal osteotomy, any method

**CPT 28297** Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with first metatarsal and medial cuneiform joint arthrodesis, any method

**CPT 28298** Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with proximal phalanx osteotomy, any method

**CPT 28299** Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with double osteotomy, any method

**CPT 28299**, by the way, was clarified with illustrations that show 3 surgical options for “double osteotomy”:

1) Bunionectomy with distal 1st metatarsal osteotomy and hallux proximal phalanx osteotomy;

2) Bunionectomy with proximal 1st metatarsal osteotomy and hallux proximal phalanx osteotomy; or

3) Bunionectomy with distal and proximal 1st metatarsal osteotomies.

Is it perfect? No, changing “correction, hallux valgus” to read “bunionectomy (correction, hallux abductovalgus)” would be best, but…a fight for another decade.

**NEW: PRESENTING Codingline 2017**

For over 16 years, Codingline has served as a focal point for questions and responses/comments on issues related to foot and ankle coding, reimbursement, and practice management. It is our pleasure to introduce a new look to Codingline’s listserv email and website. CodinglineSILVER will continue its Q/A format, but will shift from a twice a day email to a once a day service. Special categories will be set up so you can decide what foot and ankle coding, reimbursement, and practice management topics are of interest you. www.codingline.com/silver.htm through Direct to Expert and receive responses directly from Codingline. Additional benefits include 20% off Codingline hosted seminars and workshops, and complimentary registration for Codingline webinars. www.codingline.com/gold.htm

The Codingline Webinar Series will begin in February 2017, and feature presentations from Codingline expert panelists. www.codingline.com/webinars.htm
