ChartMaker Go from STI

By Joe Cerra

Nursing home, hospital inpatient, outpatient surgical center, office-based billing… it doesn't matter to us. With **ChartMaker Go** you can do all of your medical billing with one affordable system from STI Computer Services. The ChartMaker Go Mobile Billing System also includes an integrated mobile charge capture system using your smartphone. You can even view office appointments and nursing home rounds on your smartphone for easy access.

You can access your medical data from anywhere, because ChartMaker Go is a cloud-based application, so STI is maintaining your data on our secure servers, backing up your critical financial information, and updating your programs, saving your staff hundreds of hours per year in wasted time doing back-ups and loading new program upgrades.

Our mobile phone interface allows you to check patient information on your smartphone from anywhere. Need a patient's telephone number? You have it. Need to call them? Tap the number on the screen. Are you allowed to speak with the person on the phone about the patient? Check the Health Care Proxies section within the patient information on your cell. Where do I need to be tomorrow? See your cell for hospital rounds by facility, or office-based appointments. ChartMaker Go can display their room number for rounds, as well as track the patients you've seen.

Best yet, you can capture charges on your smart phone from any facility and they automatically are transferred into your ChartMaker Go medical billing system for your staff to process. Need to attach a com-

ment to the charge for your staff? Forget writing a long note to your billing people, talk it into your cell with speech to text.

Can't remember if you entered a charge for that patient encounter? Got you covered with the ability to review charges. What charges did you or an associate enter for that patient during the last visit? You can see that, and repeat the charge with a click of a button on your cell. You don't even need to repeat the same information from a previous encounter, it's on your cell. Need a new ICD10? You can search right within the application and add it to your favorite list.

Did we mention affordable? ChartMaker Go starts at $399/month for your medical practice* and $59/month/provider for Electronic Data Interface (EDI) clearinghouse fees. It will pay for itself just in lost charges, not to mention all the time your staff will save entering charges from your cryptic little paper billing notes that you gave to them in the past.

ChartMaker Go can also process your office charges and includes a free appointment scheduler that can automatically check patient eligibility online. All billing is electronic and includes automatic payment posting and electronic patient statements. If you need help with billing or collecting patient bills we can help you there as well.

For more information on ChartMaker, go check our website at http://sticomputer.com/chartmaker-go/, or email jcerra@sticomputer.com, call Joe Cerra at 800-487-9135 extension 1188, or click here.

*Prices are based on the number of tax IDs and concurrent users. Contact STI for an exact price quotation.
