

## AmLactin® Foot Repair Cream More Than a Moisturizer

**AmLactin®** Foot Repair is a rich, concentrated foot cream therapy that softens plus restores rough, dry skin from heel to toe. It is a patented formula with ULTRAPLEX®, a powerful alpha-hydroxy therapy that exfoliates dry skin and is clinically proven to hydrate.

All AmLactin® therapeutic moisturizers contain beneficial levels of **lactic acid**, a powerful yet gentle alpha-hydroxy acid (AHA) with three distinctive characteristics. It is a:

- well-recognized exfoliant, helping break down corneocytes and boosting the skin's natural renewal process
- powerful humectant that helps increase water uptake and retains moisture in the stratum corneum
- key element of the skin's Natural Moisturizing Factor (NMF)

In a 21-day randomized, single center, evaluator-blinded, within-subject comparison study, all AmLactin® products were found to be well-tolerated, showing no significant signs of irritation.

Unlike some moisturizers that don't include these key ingredients, AmLactin® Foot Repair exfoliates, smooths and hydrates your patient's dry, rough feet. Moisturizers

without exfoliating properties will eventually evaporate and the top layer of the skin return to its dry appearance.

Daily use of the AmLactin® Foot Repair Cream is one way for these patients to relieve rough, dry skin on their feet for good.

The AmLactin® Foot Repair Cream is non-greasy and fragrance-free. For best results, advise your patient to apply the Foot Repair Cream 2 times daily.

\* ULTRAPLEX® formula is a blend of ammonium lactate, potassium lactate, and sodium lactate.

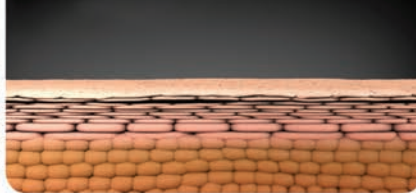

**Sunburn Alert:** This product contains an alpha-hydroxy acid (AHA) that may increase your skin's sensitivity to sunburn. Be sun-smart: use sunscreen, wear protective clothing, and limit sun exposure while using this product and for a week afterward.

## Without Exfoliation

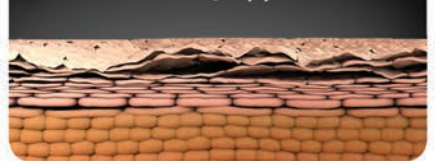

Some moisturizers don't exfoliate

Corneocytes are compressed and smoothed

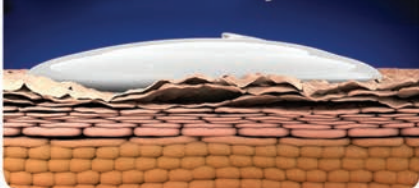

But when the moisturizer evaporates, the top layer returns to its dry appearance

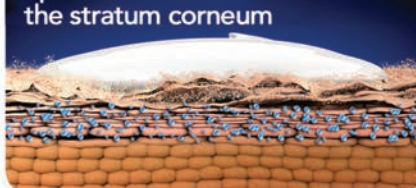

## More Than a Moisturizer

AmLactin® helps break down corneocytes

Exfoliates and increases water uptake, and retains moisture in the stratum corneum

Reveals underlying, healthy-looking skin
