

Blaine Labs: Dispense and Prosper

By Rob Onekea

Blaine Labs was founded in August of 1995 by Dr. Robert Blaine as a result of his father passing away due to complications stemming from fungal toe infections, poor circulation, and diabetes mellitus. Realizing a need for a far more effective treatment, Dr. Blaine developed Tineacide® Antifungal Cream, which has changed the landscape of OTC fungal treatment by becoming one of the best-selling products in its genre available today. Inspired by the daily medical concerns of his own patients, Dr. Blaine and his team of experts continue to develop products to address pathologies that have traditionally been poorly-treated.

Located on a three-building campus in beautiful Southern California, Blaine Labs supports state-of-the-art facilities to foster chemical research, manufacturing capabilities, and physician-direct sales and shipping.

The dedication of the Blaine Labs research and development team has helped to create Revitaderm40®, a keratolytic emollient which has also become synonymous with successful callus treatment. New research is showing that topically applied CBD has an inhibitory effect on keratinocyte proliferation and inhibits the inflammatory response noted with psoriasis and pruritus. Combining Revitaderm40® urea with CBD has proved to be stable at room temperature, and efficacious for patients with thick, dry and inflamed skin, and is now being added to Blaine's line of dermatological medical products.

With new scientific breakthroughs involving the use of CBD and Rich Hemp Seed Oil, Blaine Labs has developed the hemp-infused product HempNesic®. Hemp has shown great promise for pain relief in connection with the cannabinoid system, and in terms of how specific pain receptors react when introduced to CBD.

Today, Blaine Labs proudly manufactures over thirty FDA-registered products that reach patients globally, including Terpenicol® Antifungal Solution, Terpenicol® Antifungal

Dr. Robert Blaine

Cream, Terpenicol® Shoe Spray, Revitaderm® Wound Care, Orthonesic® Pain-Relieving Gel, Verucide® Wart Treatment, and the Vibration Anesthesia Device®.

Blaine Labs also offers a 100% patient-direct, money back guarantee on most of their products, which means dispensing Blaine Labs products is risk-free for physicians. The bottom line: if your patient sees no change or improvements using Blaine products, or is dissatisfied with the product in any way, you simply contact Blaine Labs directly and they will refund you your entire purchase price or provide you with another product at no cost to you. Blaine Labs provides this service to you and your patients because they understand the value of the doctor/patient relationship as well as the importance of reaching a solution to patients' pathology problems.

Another benefit to physicians who dispense Blaine Labs products is their policy that no products may be sold on any public websites such as Amazon, eBay, or

the like, ensuring that patients can purchase Blaine Labs products only directly from your practice.

The quality and effectiveness of products continues to be the number one priority at Blaine Labs. Moving forward, development has begun on an RX division to work directly with pharmacies and offer solutions for other podiatric pathologies that include gout, diabetic neuropathy, and tendonitis through both topical and oral treatments.

If you've experienced the joy of a patient returning to your practice and explaining that their pain no longer exists,

increase that response by *calling us today at 800-307-8818 or click here, and request a sample of Blaine Labs products.* See how our team of customer service specialists can assist you with any questions or concern you may have and get started dispensing Blaine Labs products today so that you can "Dispense and Prosper".
