

Blaine Labs Covers the Nation in Skin and Fungal Care

By Regan Tate

For over 25 years, podiatrists nationwide have trusted the experts at Blaine Labs to create premium products that are both effective and affordable. Today, Blaine Labs continues to manufacture high-quality pharmaceutical drugs and medical devices for doctors across the country.

Founded by Dr. Robert Blaine in 1995, Blaine Labs was created with the primary goal of developing the best possible products to enhance podiatry practices and improve their patients' quality of life. Motivated by the tragic loss of his father (due to complications stemming from fungal toe infections, poor circulation, and diabetes mellitus), Dr. Blaine and his team seek to provide solutions to a wide range of under-treated pathologies.

Their three-building campus houses state-of-the-art facilities designed for both chemistry research and exten-

sive manufacturing and shipping capabilities. Blaine Labs continues to grow their line of over 30 FDA-approved products with special emphasis in fungal care, wound care, skin care, and pain management. Their dedication to the health and well-being of patients nationwide is the inspiration for best-selling products like their *Revitaderm40 Emollient*[®] and *Terpenicol Antifungal Solution*[®].

Superior Skin Care: *Revitaderm40 Emollient*[®]

Topping the charts as their most-dispensed skin care product, *Revitaderm40 Emollient*[®] was formulated to gently eliminate heel fissures and enhance skin texture. Its powerful, hydrating ingredients, paired with a pumice stone and brush, work to obliterate hardened, built-up skin and retain moisture.

Best-Selling Fungal Care: *Terpenicol Antifungal Solution*[®]

Designed to eradicate harmful skin fungus, *Terpenicol Antifungal Solution*[®] has become Blaine Labs' most dis-

pensed fungal care product. The patient-favored, easy-to-use brush-on applicator and powerful fungicide make this product extremely effective in the treatment of the skin fungus that causes *tinea pedis* and onychomycosis.

Blaine Labs[®] Has You Covered

Unlike most pharmaceutical companies, Blaine Labs takes pride in the meticulous, in-house development of all their products. From receiving and testing raw materials to the shipment of products right to your clinic's doorstep, Blaine Labs covers every step of the manufacturing process. In assuming the role of a medical manufacturer, as opposed to a middleman distributor, they guarantee higher quality products at competitive prices. Call us and mention this ad for \$50 off your order.

Blaine Labs takes pride in the meticulous, in-house development of all their products

Blaine Labs' belief in their products is unwavering, prompting them to offer a **100% patient-direct, money-back guarantee**. They maintain that if a patient does not benefit from the medication when used properly and for its intended purpose, that patient will be refunded directly from Blaine Labs. Such a guarantee allows physicians to dispense without the risk and supports patients in their search for better pathology solutions.

Additionally, Blaine Labs offers private labeling opportunities, giving physicians the option to denote any of Dr. Blaine's manufactured products for resale under the physician's own name. Their promise is to promote the growth of podiatry practices worldwide by helping physicians meet all their dispensing goals.

The Blaine Labs team welcomes podiatrists with open arms. Their Southern California campus is inviting, offering physicians and other health-care professionals a closer look into the manufacturing processes. Tours of the compounding area, chemistry department, production area and more are available for year-round visits. *Blaine Labs welcomes you to call their office at (800) 307-8818, visit their website at blainelabs.com, or click here for more information.*
