

Practice EHR—The ONE for Podiatry

By Karna Morrow, CPC, RCC, CCS-P

The childhood fairy tale Goldilocks and The Three Bears comes to mind when anyone discusses the perfect fit. One may be too large, another too small, but the simplicity of the story offered “one” as being “just right!”

How might that storyline unfold if our main characters were from a podiatry practice searching for the perfect electronic health record (EHR)? What might the ONE look like? At Practice EHR, we have a strong commitment to providing a solution designed for the podiatry practice—the ONE that meets the needs and unique workflow requirements of podiatrists.

Why Practice EHR?

Practice EHR is an electronic health record (EHR) and practice management software solution built for podiatrists, with podiatrists. The software is easy and intuitive for anyone to use and lets doctors—and staff—focus on patients instead of worrying about technology.

One solution to handle it all—from anywhere.

Practice EHR helps manage every task in the practice, with a seamless workflow from check-in to check-out, billing to claim submission, and scheduling to follow up—all in one place. The cloud-based software lets you have the freedom to work from anywhere via an internet-connected desktop, laptop, or iPad device.

Designed to work the way you do.

Designed to meet the unique needs of podiatry, Practice EHR offers ready-to-use templates and code sets that help podiatrists capture the patient visit more accurately and with ease while following specific coding and regulatory guidelines for more accurate billing and reporting. As an ONC Certified EHR, Practice EHR also helps the practice quickly track progress in real-time towards meeting quality initiative goals.

The simple, intuitive, podiatry-tailored workflow is uniquely designed to work the way podiatrists do—reducing the time spent charting and making it easy to write notes, prescribe medications, code encounters, and manage patients efficiently. Practice EHR can improve productivity across the board, giving you more time with your patients, and not just paperwork.

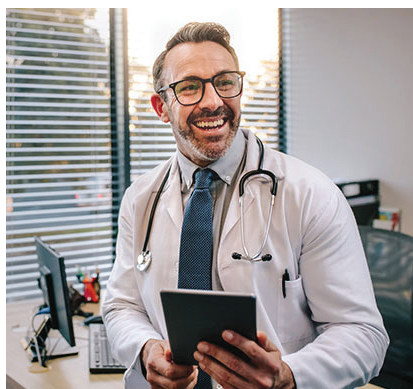

Built for the needs of your practice.

Practice EHR can easily scale to support practices of any shape or size, whether a small podiatry practice or large practice with multiple locations and users. The software is designed to meet the needs of podiatry and can scale to support your growth, whatever your goals may be.

Features

With a powerful set of features, Practice EHR helps podiatrists streamline the workflow, focus on patients, and amplify productivity.

- Charting
- Clinical Decision Support
- e-Prescribing
- Voice Recognition
- Lab Integrations
