

## Biomedix Takes PAD Testing into a New Era with the PADnet 5th Generation

*A combination of intuitive interface changes, new scheduling tools, and straightforward options for test results all make the ‘5th Gen’ a landmark evolution for doctors looking to identify vascular disease.*

**By Chris Trygstad, MBA, a Vice President at Biomedix**

Biomedix, a market leader in medical technology and innovation, is proud to announce a new milestone for its flagship vascular testing device, the PADnet. The technology is set to enter a new era with its most extensive update yet, referred to as the “PADnet 5th Generation,” distinguishing it from its predecessor, the PADnet 4th Generation.

The latest iteration of PADnet introduces a suite of

enhancements, including a return to the well-known ‘PADman’ interface. The new interface empowers users to seamlessly select specific test segments through an intuitive figure-based display. Departing from the previously linear, structured list of segments, the PADman interface transforms the testing process, offering greater flexibility, customization, and an overall more user-friendly experience.

Another innovative addition is in the integration of member roster imports, a feature that significantly streamlines the scheduling and data entry process. With the update, users can upload entire patient rosters in spreadsheet format to the PADnet platform. Subsequently, users can promptly select any member for scheduling, eliminating any need for manual data entry and expediting test preparation.

Perhaps the most noteworthy change introduced in this update lies in its test results. With the 5th Gen, users can now seamlessly view, interpret, and print study results directly from the testing application. This functionality provides medical practices with the flexibility to either send test results to external providers for interpretation or engage in on-the-spot result analysis with patients, letting

practices test the way they want to.

“Our goal was to empower users with greater control over the testing process,” said John Romans, CEO at Biomedix. “PADnet was already renowned as the most versatile and comprehensive PAD testing device on the market. With the introduction of the 5th Generation and its array of new features, PADnet also establishes itself as the most convenient and user-friendly option available.”

This monumental update underscores Biomedix’s commitment to advancing healthcare technology and enhancing the capabilities of medical professionals worldwide. The PADnet 5th Generation represents a significant leap forward in vascular testing technology, further solidifying Biomedix’s position as a pioneer in the medical technology industry.
