

New! PowerStep® Morton's Extension Insoles for MTP Joint Stability and Pain Relief

By Jay Cain, Director of B2B Marketing, Foundation Wellness

The leading brand of podiatrist-recommended orthotics introduces the all-new PowerStep Morton's Extension insoles. Our latest multi-functional orthotic insoles provide state-of-

What sets the Morton's Extension insoles apart is the integration of a lightweight and highly resilient carbon fiber stability plate.

the-art support for relieving and preventing pain from conditions affecting the first metatarsophalangeal (MTP) joint.

The Morton's Extension insole offers healthcare professionals a valuable tool for treating a variety of MTP joint conditions, including hallux rigidus/limitus, sesamoiditis, arthritis, and turf toe. By providing effective support and limiting the range of motion of the MTP joint, these insoles help reduce pain and improve foot function and mobility throughout treatment.

Key features of the PowerStep Morton's Extension insoles include:

- **Carbon Fiber Stability Plate:** Limits MTP joint movement, promoting healing and reducing pain.
- **Semi-Rigid Arch Support:** Cradles the arch and heel, enhancing stability and motion control while encouraging healthy alignment.
- **Dual-Layer Cushioning:** Provides superior comfort and shock absorption from heel to toe.

- **Odor Control Top Fabric:** Reduces heat, friction, and perspiration.

What sets the Morton's Extension insoles apart is the integration of a lightweight and highly resilient carbon fiber stability plate. This plate acts as a stiffener to limit movement of the MTP joint to promote healing and re-

duce pain, making it valuable in post-surgical care where stability and protection of healing tissue are essential to recovery.

We performed extensive testing of the insole that revealed its ability to deliver long-lasting results of stability and pressure relief thanks to its durable construction. The carbon fiber stiffener proved to work in synergy with our signature arch shape to support and stabilize the entire foot. Along with our premium cushioning, PowerStep insoles deliver the perfect balance of comfort and support to align and stabilize the feet, relieving and preventing pain from mild to moderate pronation.

The Morton's Extension insole is the latest addition to our collection of condition-specific insoles. Unlike our medically exclusive ProTech® orthotics, the Morton's Extension insoles will be available to purchase for your patients and customers over the counter. They are also available to all PowerStep providers.

PowerStep: A Trusted Solution for Improving Patient Care
