

Rotatool™ and ToeFX®: The Winning Combination

By Jennifer Winter

Podiatrists face daily challenges in delivering safe, effective, and comfortable treatments for patients with onychomycosis and other nail conditions. Rotatool Suction Units and ToeFX Light Therapy provide a powerful, complementary solution—improving treatment outcomes while ensuring a safer clinic environment.

Rotatool™: Debridement with Ultra-Quiet Suction

Engineered for high performance and durability, Rotatool vacuum-integrated rotary units provide reliable operation in clinical settings. The units are designed with powerful, integrated suction that efficiently removes harmful airborne dust particles, reducing exposure to fungal spores and contaminants to enhance practitioner and patient safety as well as clinic hygiene.

The lightweight, ergonomic handpiece reduces strain during prolonged use, offering exceptional handling for precise nail debridement. With an ultra-quiet suction motor, variable speed control, and low-maintenance operation, Rotatool enhances efficiency when performing nail debridement.

ToeFX®: Onychomycosis Treatment with Advanced Technology

Onychomycosis affects millions of patients, yet traditional treatments—such as laser therapy or oral antifungals—often

The FDA-cleared ToeFX photodisinfection therapy uses light-based technology to treat fungal infections without the limitations of lasers or medications.

come with limitations. The FDA-cleared ToeFX photodisinfection therapy uses light-based technology to treat fungal infections without the limitations of lasers or medications.

Unlike laser treatments, which rely on heat as mode of action, ToeFX works through a photodynamic reaction that selectively targets fungal cells, leaving surrounding tissue unharmed. It's also an ideal solution for patients who cannot tolerate oral antifungal medications due to contraindications or side effects.

Why Podiatrists Choose Rotatool™ and ToeFX®:

- Enhanced treatment outcomes—More effective fungal clearance with debridement and light therapy.
- Increased patient comfort—Non-invasive, pain-free alternative to lasers or medications.
- Improved clinic hygiene—The integrated suction reduces airborne dust and contaminants.
- Reliable and low-maintenance—Durable, ergonomic, and designed for busy clinics.

The Perfect Pairing for Superior Results

By combining the precision debridement technology from Rotatool with the advanced photodisinfection therapy in ToeFX, podiatrists can provide a complete, pain-free, and non-invasive solution for managing fungal nail infections. Debridement with Rotatool burs enhances ToeFX penetration, maximizing treatment efficacy and accelerating patient outcomes while ensuring a safer, cleaner practice environment.

Join leading podiatrists who trust Rotatool and ToeFX for superior fungal nail treatment. Visit rotatool.com or click here to request a demo or speak with a specialist today!
