

## OrthoFeet Announces Significant Advances in Footwear with Hands-Free and Medicare A5500 PDAC Approved Styles

*They've also unveiled their new sport collection and enhanced professional ordering website.*

### By The Orthofeet Team

OrthoFeet, a leading innovator in orthopedic and comfort footwear, is proud to announce significant advancements in its product offerings, solidifying its commitment to providing unparalleled comfort, support, and accessibility for patients. Now available are groundbreaking Hands-Free styles and a comprehensive range of Medicare A5500 PDAC Verified styles in every category for both men and women, including Athletics, Casual, Boots, Outdoor, Work, Sandals, and Slippers.

OrthoFeet's dedication to biomechanical excellence and pain relief is evident in the core features integrated into every pair of shoes. The innovative Ortho-Cushion™ System sets OrthoFeet apart, featuring a contoured orthotic insole with anatomical arch support, superior cushioning, and an ergonomic sole with a mild rocker design. These elements work in harmony to help alleviate heel and foot pain, reduce pressure on the bottom of the foot, provide excellent support for flat feet, and offer relief from various foot conditions, including bunions, hammertoes, plantar fasciitis, and neuropathy.

Further enhancing patient comfort and protection, OrthoFeet footwear boasts protective interior linings that are soft, smooth, and padded with extra cushion to eliminate pressure points. Many styles feature stretchable uppers that conform perfectly to the foot's contours, offering a customized fit and easing pressure on sensitive areas. The non-binding, extra-depth design provides ample room for toe movement and accommodates thick insoles and custom orthotics. Additionally, two sets of removable spacers (2mm and 3mm) are included with every pair, allowing for a personalized fit. Select styles also offer a convenient Tie-Less Lace System and Two-Way Strap System for effortless fastening and unfastening.

Responding to the growing demand for specialized athletic footwear, OrthoFeet is thrilled to introduce its new Sport styles. This exciting expansion includes dedicated Men's (Fairway and Birdie) and Women's (Ap-

proach Shot) Golf Shoes, engineered to provide stability, comfort, and support on the course, as well as innovative Women's (Ace) Pickleball shoes, designed for optimal performance and agility on the court. These new additions underscore OrthoFeet's commitment to supporting
